Procurement Solutions - Shipping Containers

Container shipping has been around for over 50 years. Shipping containers are strong metal boxes that are used to transport goods from place to place. They are generally made of steel and designed to be robust enough to handle long shipments. Many customers now request containers for secure storage or customize to suit other needs.

ENAD's procurement team employs a variety of acquisition methods to meet the unique shipping and storage needs of our customers. We can also customize containers to meet individual needs for racks and shelving, kits, dehumidifiers and accessory configuration kits.
